

Report druhého projektu ITS

onegen někdo (xkrame00)

18. 04. 2024 v Brně

Upravené testy

Z několika scénářů byly odstraněny zbytečné členy „a / an / the“:

Given user is on "Monitor" category page
And store sells "Samsung SyncMaster 941BW" in "Monitor" category
When user adds "Samsung SyncMaster 941BW" to their shopping cart
Then shopping cart contains a "Samsung SyncMaster 941BW"

Given user is on "Monitor" category page
And store sells "Samsung SyncMaster 941BW" in "Monitor" category
When user adds "Samsung SyncMaster 941BW" to their shopping cart
Then shopping cart contains "Samsung SyncMaster 941BW"

(cart.feature:2)

Given the user is not logged in
When the user proceeds to checkout
And the user fills out billing and personal information
And the user fills out shipping information
And user selects a payment method
And the user confirms the order
Then order confirmation should be displayed

Given user is not logged in
When user proceeds to checkout
And user fills out billing and personal information
And user fills out shipping information
And user selects a payment method
And user confirms the order
Then order confirmation should be displayed

(checkout.feature:1)

Background:
Given the user's shopping cart is not empty

Background:
Given user's shopping cart is not empty

(checkout.feature)

Ve scénáři cart.feature:1 byl odstraněn překlep a také opakující se informace:

Given user is on the store's homepage
And homepage features "iPhone" on its homepage
When user adds "iPhone" to their shopping cart
Then shopping cart contains an "iPhone"

Given user is on the store's homepage
And homepage features "iPhone"
When user adds "iPhone" to their shopping cart
Then shopping cart contains "iPhone"

Scénář cart.feature:4 byl mírně přeformulován, aby byly zřetelnější kroky na aktuálně zobrazeném produktu:

Given user is on "Palm Treo Pro" product page
When user sets quantity to "3"
And user adds "Palm Treo Pro" to their shopping cart
Then shopping cart contains "3" "Palm Treo Pro"

Given user is on "Palm Treo Pro" product page
When user sets current item's quantity to "3"
And user adds current item to their shopping cart
Then shopping cart contains "3" "Palm Treo Pro"

Scénář checkout.feature:1 byl upraven, aby lépe odpovídal postupu objednávání v systému OpenCart (oddělení personal/billing údajů, přidán krok výběru Guest Checkout):

Given user is not logged in
When user proceeds to checkout
And user fills out billing and personal information
And user fills out shipping information
And user selects a payment method
And user confirms the order
Then order confirmation should be displayed

Given user is not logged in
When user proceeds to checkout
And user selects guest checkout
And user fills out personal information
And user selects a shipping option
And user selects a payment method
And user confirms the order
Then order confirmation is displayed

Odstraněné testy

Scénář checkout.feature:2 je přeskočen kvůli nutnosti registrace (je stále přítomen, ale nespustí se).

Scénář checkout.feature:3 byl odstraněn kvůli komplikované implementaci (Given vyžadoval konkrétní množství v košíku):

Scenario Outline: Shipping Cost
Given the user is checking out with subtotal <subtotal>
When user selects a shipping method that costs <shipping>
Then the total cost should be <total>

Examples:

	cart		shipping		total	
	123.20		8.00		131.20	
	200.00		5.00		205.00	

Failing testy

Scénář checkout.feature:1 na Docker-kontejneru druhého projektu selže. Na rozdíl od prvního, stránka checkout/checkout směřuje na checkout/cart, přestože košík není prázdný. Příčinu se mi nepodařilo najít. Pro jistotu je tento scénář v odevzdané verzi přeskočen.

```
Scenario: Guest Checkout
  Given user is not logged in
  When user proceeds to checkout
    And user selects guest checkout
    And user fills out personal information
    And user selects a shipping option
    And user selects a payment method
    And user confirms the order
  Then order confirmation is displayed
```
